PROFESSIONAL SUMMARY

Backend Developer and Automation Engineer with 3+ years in Telecom (BSS/OSS). I design and build Python services and tools that ship to production and remove critical manual work: my flagship project is an operations hub (TUI + web with Flask/HTMX/SSE) that unified ~12 tools, cut incident analysis from 1-2 h to ~20 min, and raised team output by ~50%, backed by ~527 automated tests (pytest). Strong in API design (REST/GraphQL), distributed-systems integration (Kubernetes, Azure/AKS, Kafka, Camunda BPM), advanced SQL, and CI/CD. Full-stack experience (React, Next.js, Node, Supabase) and AI integration (Anthropic/Claude). Focused on measurable impact.

TECHNICAL SKILLS

Languages	Python, JavaScript, TypeScript, SQL, Bash, AWK
Backend, APIs & AI	Flask, Node.js, REST APIs, GraphQL, Supabase, Prisma, Anthropic (Claude)
Infrastructure & DevOps	Kubernetes, Azure (AKS), Camunda BPM, Kafka, Datadog, Git, GitHub Actions, CI/CD
Data & BI	PostgreSQL, SQL Server, Oracle, Power BI, Metabase, Grafana, Advanced Excel, ETL
Frontend	React, Next.js, HTML5, CSS3, Tailwind CSS, Vite
Testing	pytest, Vitest, Playwright
Tools	Azure DevOps, JIRA, Trello, Postman, DBeaver

WORK EXPERIENCE

Data Analyst / Automation & L1 Support Analyst <i>Indra Minsait — Pangea Project / NTTData</i>	Dec 2025 – Present
- Designed and built the N1 Operations Hub (TUI + web with Flask/HTMX/SSE) that unified the ~12 tools the team used to run one by one over SSH, with live streaming execution and a safe dry-run -> confirm flow for destructive operations. It cut incident analysis from ~1-2 h to ~20 min and operational tasks (releases/sanity checks) from 30+ min to 2-3 min, raised team output ~50% (4 analysts), and removed the OpenLens license dependency. - Integrated the BSS/OSS stack under a single declarative contract: Camunda BPM (process-tree analysis and root-cause detection), GraphQL/Apollo and TM Forum APIs, Kafka/Strimzi (guided restart of dead consumers), Kubernetes/Azure (AKS), and multi-engine databases (PostgreSQL/MySQL/SQL Server). - Built advanced SQL queries with CTEs and JSONB in PostgreSQL to analyze millions of records (Notifications, WorkItems, OrderEvents), identifying obsolete records with 99.8% accuracy to support data-purge decisions in production. - Developed diagnostic modules that translate technical errors (exit codes, OOM, HikariPool, TMF622 variables) into operational language, with Excel/HTML export; kept quality up with ~527 automated tests (pytest). - Designed and maintained Power BI and Grafana dashboards and Datadog log analysis for operational KPIs and observability, with proactive incident detection by severity and frequency.	
Back Office Technical Support Analyst — Claro Enterprise <i>Indra Minsait</i>	Oct 2024 – Dec 2025
- Analyzed FTTH and HFC network monitoring data in Grafana, identifying real-time degradation patterns that enabled early alerts and reduced service downtime by 20%. - Integrated Grafana with custom data sources (internal databases, monitoring APIs), improving anomaly detection by 30% and centralizing the team's operational visibility. - Extracted and consolidated IPTV/OTT incident data from multiple sources into unified Excel reports to optimize resource allocation and prioritize critical cases.	
Technical Support Supervisor — Entel Enterprise <i>Servicios de Call Center (SCC)</i>	Aug 2022 – Oct 2024
Produced executive reports processing 15,000+ monthly tickets with advanced Excel (pivot tables, VBA macros, nested formulas), giving management full operational visibility.	

- Implemented a semi-automated KPI tracking system in Excel that cut weekly report generation time by 60%.
- Built an Excel tool that automated frequent lookups and calculations, reducing average handling time (AHT) by 20%.

FEATURED PROJECTS

N1 Operations Hub (Telecom — PangeaCO) — Central hub (TUI + web) unifying ~12 operational tools with live execution (SSE) and a safe dry-run -> confirm flow; integrates Camunda BPM, GraphQL, Kafka, and Kubernetes/Azure.
Python · Flask · HTMX · SSE · Camunda BPM · GraphQL · Kafka · Kubernetes · Azure · pytest

KidSpark — AI-powered EdTech platform: parents upload notebook photos and Claude (vision) generates adaptive exercises (SM-2), with AI cost control and production-grade security. <https://kidspark-steel.vercel.app>
Next.js 16 · TypeScript · Prisma · PostgreSQL · Anthropic (Claude) · NextAuth · Vitest

GradeFlow — Academic-tracking app with a custom PDF parser, weighted GPAs, and a 'minimum grade to pass' calculator; per-user private data (RLS). <https://seguimiento-notas.vercel.app>
React · TypeScript · Supabase · PostgreSQL · Google OAuth · Vitest

Personal Budget App — Personal finance (Peru): optimistic state with reconciliation/rollback, payslip net pay (pension/overtime), and credit-card billing cycle with installments. <https://zzloquillozz.github.io/presupuesto-personal/>
React · Supabase · PostgreSQL · PKCE Auth · RLS · GitHub Actions

EDUCATION

Systems Engineering — Universidad Tecnológica del Perú (UTP)

In progress — expected 2027

Information Systems Developer — IDAT

2022 – 2024
